

YEAR OF FIRST INVESTMENT

1998

As a global energy operator, Total made its commitments to the environment and community engagement an integral part of its strategy. From ensuring people's safety and security to meeting the challenges of climate change and strengthening its integration into local communities, the group acts in a sustainable and responsible manner every day. This is what being committed to better energy is all about.

As a major energy company, Total wants to contribute to three core challenges: satisfying the energy needs of a growing population, limiting the impact of climate change and adapting to changing customer expectations.

The world needs better energy to ensure sustainable, responsible growth. Because the group's ambition is to become the responsible energy major, it is committed to providing safer, cleaner and more affordable energy that creates value.

Performance, reference frameworks and reporting

Total has been included continuously in the FTSE4Good index (London Stock Exchange) since

2001 and in the Dow Jones Sustainability World Index (DJSI World – New York Stock Exchange) since 2004. Total has been listed on DJSI Europe every year since 2005, excepting 2015. Total was third of the extractive sector and first of the Oil & Gas sector in the first ranking of Corporate Human Rights Benchmark published in 2017.

In terms of reporting, Total refers to the IPIECA (global oil and gas industry association for environmental and social issues) guidance and to the Global Reporting Initiative (GRI).

In 2016, Total committed to contributing to the achievement of the UN Sustainable Development Goals (SDGs) and in 2017, the group launched a project to identify and prioritize the SDGs to which it can make the most significant contribution and make public commitments in a show of its support for the United Nations' recommendations for the implementation of the SDGs.

YEAR OF FIRST INVESTMENT

2017

At GEA, sustainability and value creation are inextricably intertwined. They serve as its guideline for entrepreneurial decisions and the further advancement of the group. GEA's understanding of sustainability implies that the group assumes responsibility for the way it handles its business and its economic, ecological and social implications while ensuring transparency of reporting in this field. Against this backdrop, GEA critically reviews its own activities in relation to relevant sustainability issues such as the protection of resources, human rights and the fight against corruption.

GEA's solutions are characterized by megatrends such as continued population growth, rising urbanization and progressing climate: in the future, more and more people will require an adequate supply of food, energy or pharmaceutical products - always on the premise that resources are being conserved. As an internationally active technology group, which is one of the world's largest suppliers of process technology in food production, GEA deals with these macroeconomic trends. GEA is convinced that only industrial process technology can meet the safety, quality and shelf life requirements of critical consumers.

GEA's corporate claim encapsulates the central promise of "engineering for a better world". In this way, GEA sets itself the goal of designing value-added processes in a responsible manner and contributing to the sustainable management and protection of natural resources with increasingly efficient products and process solutions for customers. This claim is reflected in the mission statement "Sustainable value creation"

Frameworks and performance

GEA welcomes the principles of the UN Global Compact initiative and endorses all internal and external corporate responsibility initiatives taking place within the framework of the advancing process of internationalization.

The group also pledged to respect human rights and generally accepted core labor standards of the ILO and it fully abides by the OECD Guidelines for Multinational Enterprises.

GEA participates in the annual EcoVadis CSR performance monitoring scheme-in 2017, it improved its rating to Silver from Bronze, and scored C in the 2017 COP Climate Change.
